

Mohamed Saadaoui

Software Engineer | Java • Spring Boot • React • Microservices • AI

Software Engineering graduate specializing in Java/Spring Boot. Built microservices, AI features, and CI/CD pipelines during a final-year internship at ESPRIT. Seeking a Junior Software Engineer / Full-Stack Developer role.

EDUCATION

ESPRIT <i>Engineering Degree in Computer Science – Software Engineering</i>	Tunis, Tunisia 2025
Ecole Polytechnique <i>Bachelor's Degree in Computer Networks</i>	Tunis, Tunisia 2018 – 2021

EXPERIENCE

Final-Year Internship – Software Engineer <i>ERP ESPRIT – Academic Project Management, Evaluation & AI Assistant</i>	Jun. 2024 – Jan. 2025 Tunis, Tunisia
- Designed 6 Spring Boot microservices (scheduling, evaluation, auth, notifications, projects, juries) orchestrated on API Gateway/Eureka with OpenFeign, serving 300+ active users. - Built a Dialogflow AI assistant that cut support requests by 70% for students, faculty, and admins. - Engineered a constraint-based scheduler generating conflict-free schedules across 300+ sessions, replacing a manual process. - Secured all services with Spring Security (JWT + RBAC) and automated CI/CD with Docker and GitHub Actions.	
Full Stack Developer – Engineering Internship <i>UTSS</i>	Jun. 2023 – Sep. 2023 Tunis, Tunisia
- Developed a real-time inventory system with Spring Boot, React, and PostgreSQL, tracking movements across 3 warehouses. - Designed REST APIs and optimized SQL queries, cutting response times 30% and automating manual paper-based workflows.	

PROJECTS

Smart Warehouse Platform – Multi-Warehouse Inventory & Logistics Java 21, Spring Boot, React, TypeScript, PostgreSQL, Docker
- Built a multi-warehouse logistics platform with Spring Boot, PostgreSQL, and React/TypeScript: real-time stock tracking, low-stock alerts, inter-site transfers. - Secured it with Spring Security (JWT + RBAC), tested with JUnit 5/Mockito/Testcontainers, and deployed via Docker Compose + GitHub Actions.
TuniDesk – IT Service Management Platform Java 21, Spring Boot 3, React 19, TypeScript, PostgreSQL
- Built an IT service platform with Spring Boot 3, React 19, and PostgreSQL: ticket lifecycle, SLA breach detection, audit logs. - Delivered real-time notifications over WebSocket/STOMP with role-based access and OpenAPI/Swagger docs.
Job Matching Platform Spring Boot, React, OpenAI, Docker, JWT
Built an AI candidate-job matching platform extracting CV skills via the OpenAI API and scoring candidates by semantic comparison; secured with JWT and Docker.

TECHNICAL SKILLS

Backend: Java 17/21, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT, RBAC, JUnit 5
Frontend: React, TypeScript, JavaScript
Databases: PostgreSQL, MySQL, MongoDB
DevOps: Docker, Docker Compose, GitHub Actions, CI/CD, Linux
Architecture: Microservices, API Gateway, Eureka, OpenFeign, SOLID, Design Patterns

LANGUAGES

Arabic: Native French: C1 English: C1
